Election/Restriction

1. Claims 1-4 are pending.

Improper Markush

2. Prior to setting forth the restriction requirement, it is pointed out that applicants have presented instant claims in improper Markush format, see *Ex parte Markush*, 1925 C.D. 126, *In re Weber*, 198 USPQ 334 and MPEP 803.02 and 806.04. The claims are improperly set forth as the genus claims encompassing multiple products, as identified and claimed, fail to share the characteristics of a genus, i.e., a common utility and a substantial structural feature essential to the disclosed utility. Alternatively, the claims define multiple structurally distinct compounds capable of different use, with different modes of operation, different function and different effects. A reference against one of the claimed components or methods would not be a reference against the other. Therefore, the restriction will be set forth for each of the various groups, irrespective of the improper format of the claims, because the claims define inventions which are not proper species.

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2 in part, drawn respectively to the extent of nucleic acids encoding SEQ ID NO:4 (including SEQ ID NO:3), classified for example in class 536, subclass 23.1.

- II. Claims 1 and 3 in part, drawn respectively to the extent of nucleic acids encoding SEQ ID NO:2 (including SEQ ID NO:1), classified for example in class 536, subclass 23.1.

Art Unit: 1647

III. Claims 1 and 4 in part, drawn respectively to the extent of nucleic acids encoding SEQ ID NO:6 (including SEQ ID NO:5), classified for example in class 536, subclass 23.1.

4. The inventions are distinct, each from the other because of the following reasons:

5. Inventions I-III are related as products. The products are distinct each from the other as the products are comprised of divergent structure and exhibit different effects and function. For example the nucleic acids differ in each of the SEQ ID NO's. The products indicated as I-III constitute patentably distinct inventions. Each of the polynucleotides and polypeptides encoded thereby has a unique structural feature which requires a unique search of the prior art. The inventions indicated as I-III differ in structure and function as they are composed of divergent nucleic and amino acids and are differentially able to hybridize, bind or mediate biological functions. A reference to one element would not constitute a reference to another. In addition, searching all of the molecules in a single patent application would bear an undue search burden on the examiner and the USPTO's resources because the indicated searches are not co-extensive.

6. Because these inventions are distinct for the reasons given above and the search required for any Group is not required for any other Group, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1647

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143)
9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
10. Any inquiry of a general nature or relating to the status of this general application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
